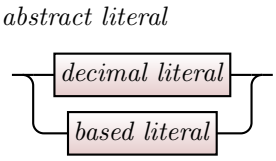
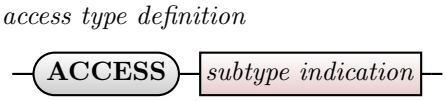
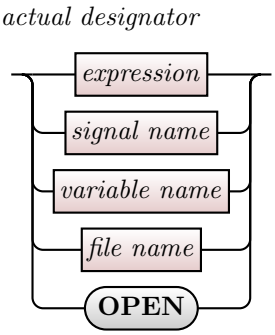
abstractLiteralBox



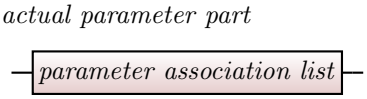
accessTypeDefinitionBox



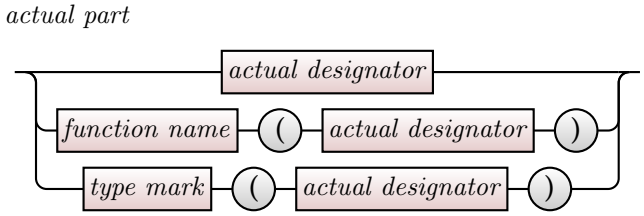
actualDesignatorBox



actualParameterPartBox

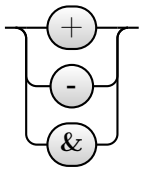


actualPartBox



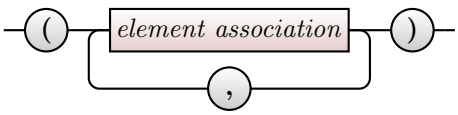
addingOperatorBox

adding operator



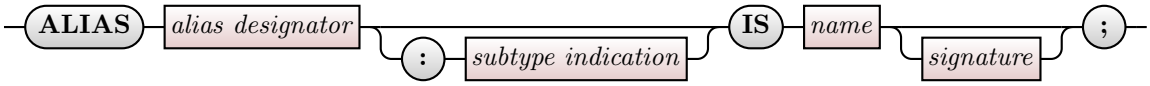
aggregateBox

aggregate



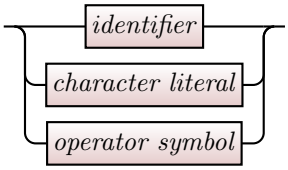
aliasDeclarationBox

alias declaration



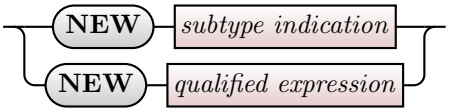
aliasDesignatorBox

alias designator

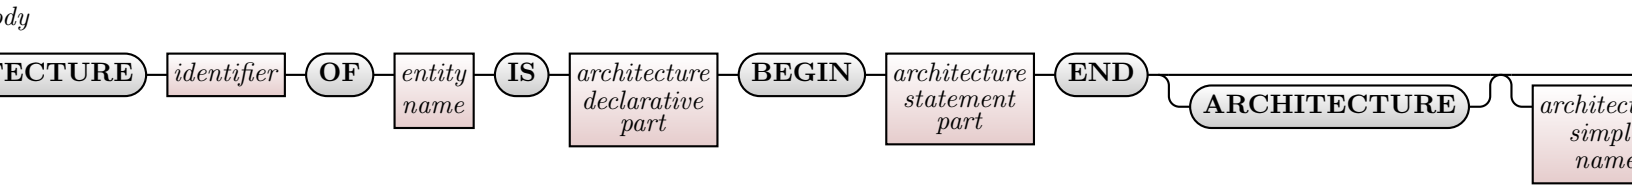


allocatorBox

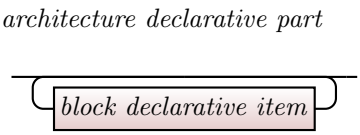
allocator



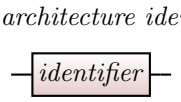
architectureBodyBox



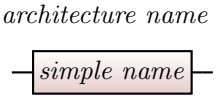
architectureDeclarativePartBox



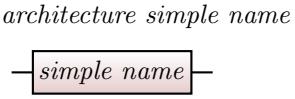
architectureIdentifierBox



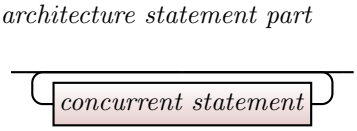
architectureNameBox



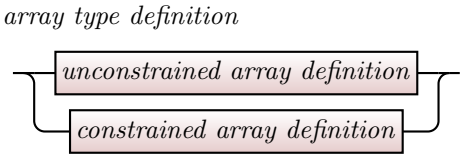
architectureSimpleNameBox



architectureStatementPartBox

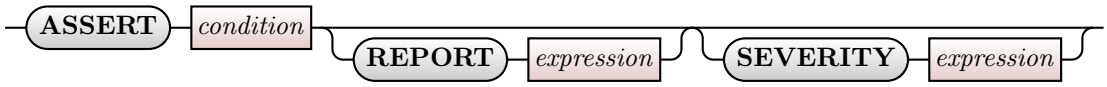


arrayTypeDefinitionBox



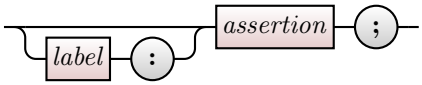
assertionBox

assertion



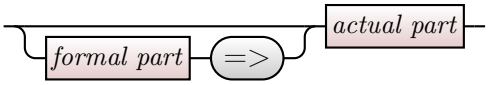
assertionStatementBox

assertion statement



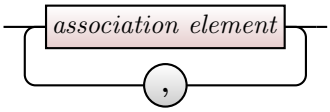
associationElementBox

association element



associationListBox

association list



attributeDeclarationBox

attribute declaration

attributeDesignatorBox

attribute designator

attributeNameBox

attribute name

attributeSimpleNameBox

attribute simple name

attributeSpecificationBox

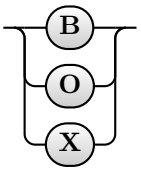
attribute specification

baseBox

base

baseSpecifierBox

base specifier

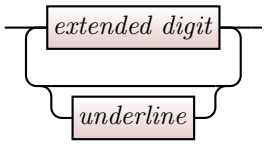


baseUnitDeclarationBox

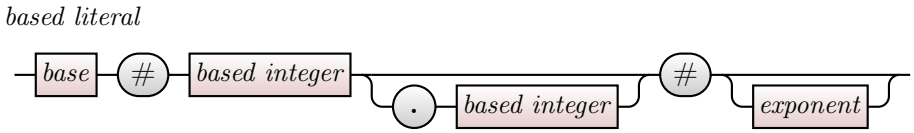
base unit declaration

basedIntegerBox

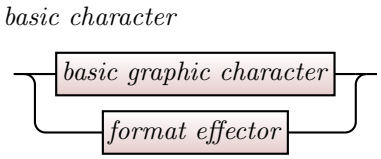
based integer



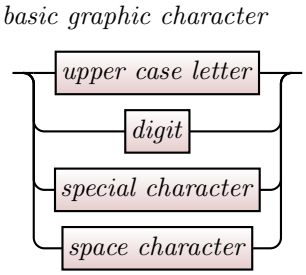
basedLiteralBox



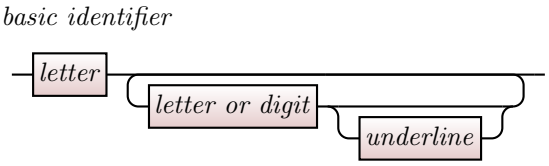
basicCharacterBox



basicGraphicCharacterBox

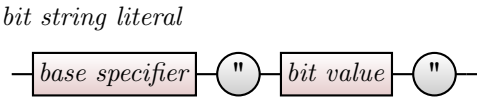


basicIdentifierBox



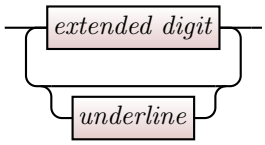
bindingIndicationBox

bitStringLiteralBox



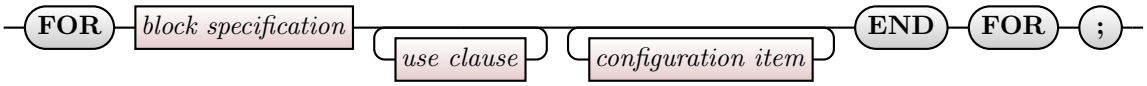
bitValueBox

bit value



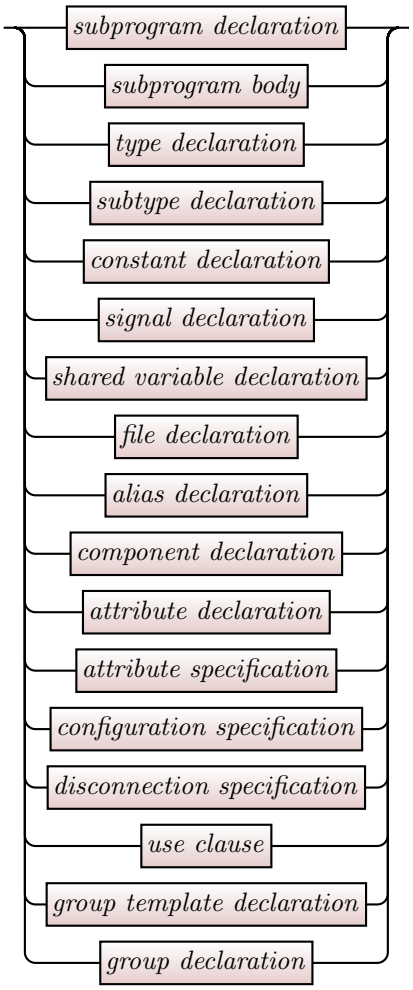
blockConfigurationBox

block configuration



blockDeclarativeItemBox

block declarative item

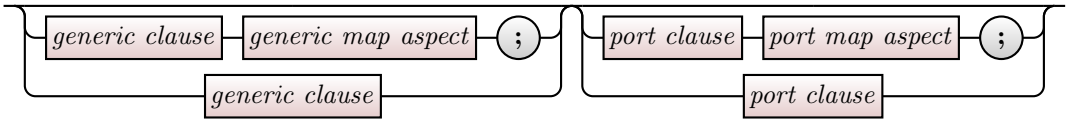


blockDeclarativePartBox

block declarative part

blockHeaderBox

block header

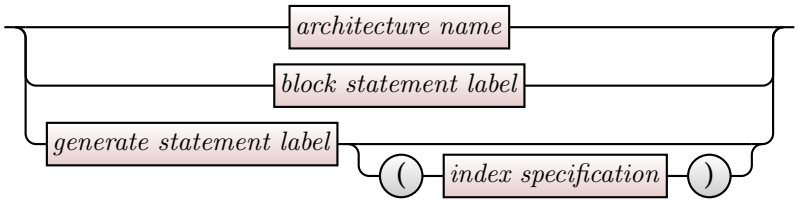


blockLabelBox

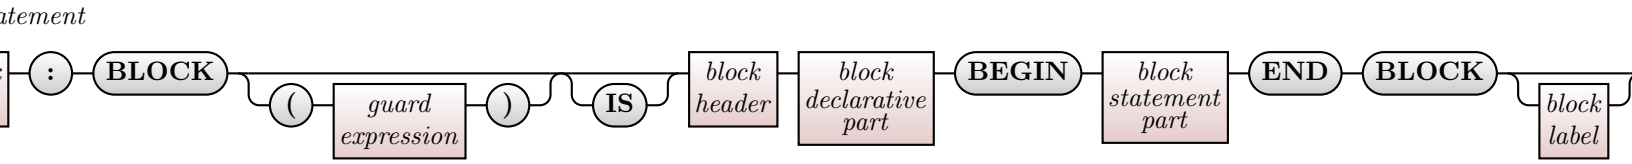
block label

blockSpecificationBox

block specification



blockStatementBox



blockStatementLabelBox

block statement label

blockStatementPartBox

block statement part

booleanExpressionBox

boolean expression

caseLabelBox

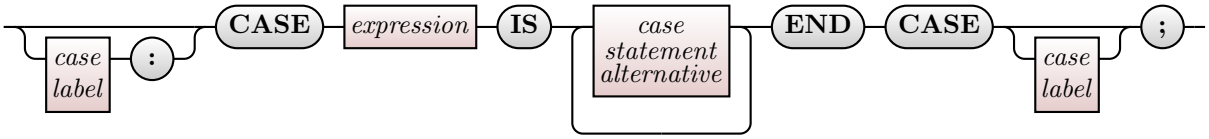
case label

caseStatementAlternativeBox

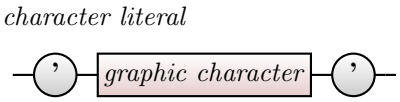
case statement alternative

caseStatementBox

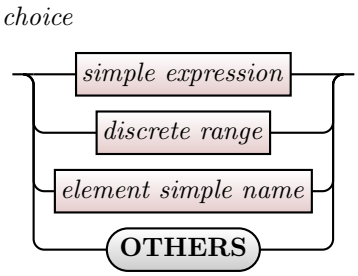
case statement



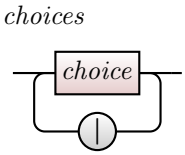
characterLiteralBox



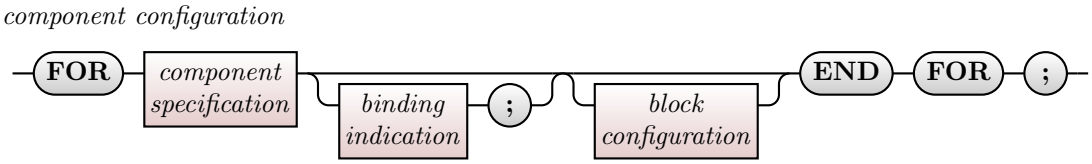
choiceBox



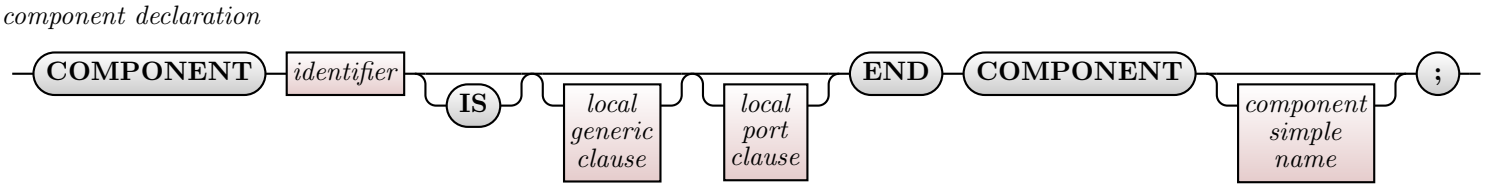
choicesBox



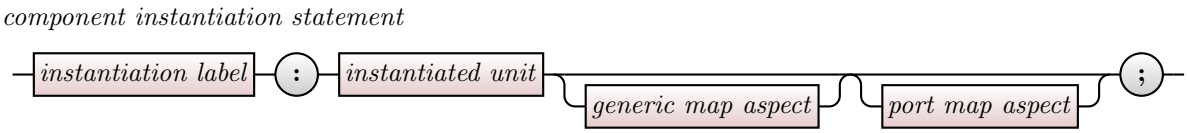
componentConfigurationBox



componentDeclarationBox



componentInstantiationStatementBox



componentNameBox

component name

componentSimpleNameBox

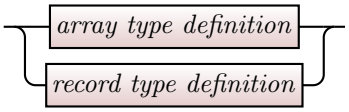
component simple name

componentSpecificationBox

component specification

compositeTypeDefinitionBox

composite type definition



concurrentAssertionStatementBox

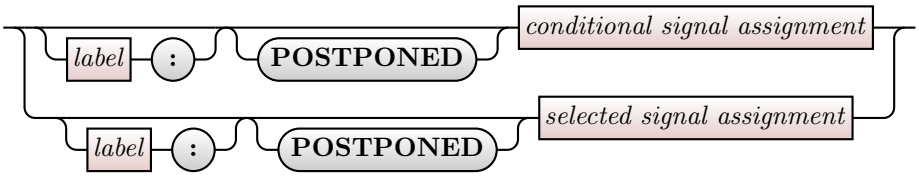
concurrent assertion statement

concurrentProcedureCallStatementBox

concurrent procedure call statement

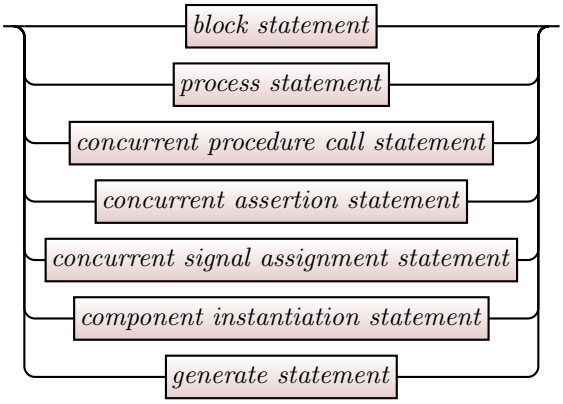
concurrentSignalAssignmentStatementBox

concurrent signal assignment statement



concurrentStatementBox

concurrent statement



conditionBox

condition

conditionClauseBox

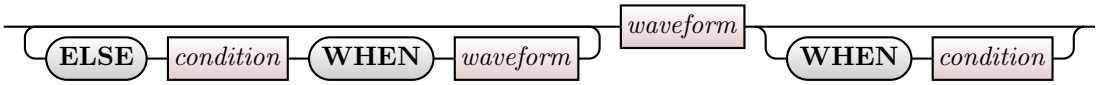
condition clause

conditionalSignalAssignmentBox

conditional signal assignment

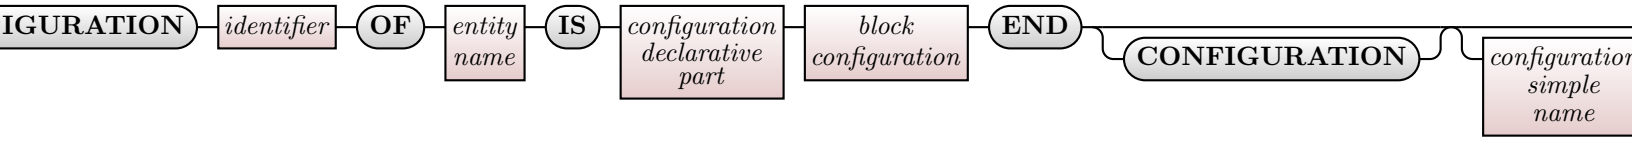
conditionalWaveformsBox

conditional waveforms



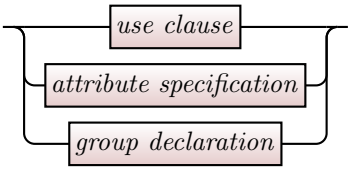
configurationDeclarationBox

on declaration



configurationDeclarativeItemBox

configuration declarative item

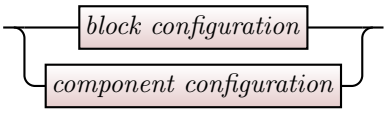


configurationDeclarativePartBox

configuration declarative part

configurationItemBox

configuration item



configurationNameBox

configuration name

configurationSimpleNameBox

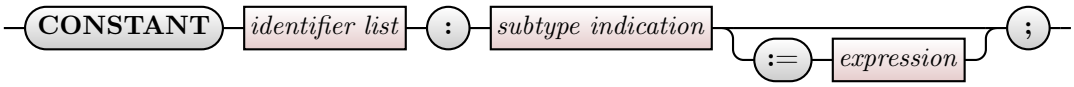
configuration simple name

configurationSpecificationBox

configuration specification

constantDeclarationBox

constant declaration

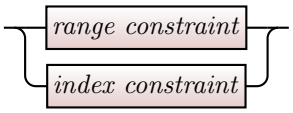


constrainedArrayDefinitionBox

constrained array definition

constraintBox

constraint

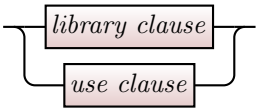


contextClauseBox

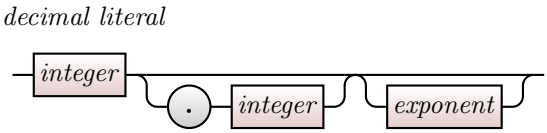
context clause

contextItemBox

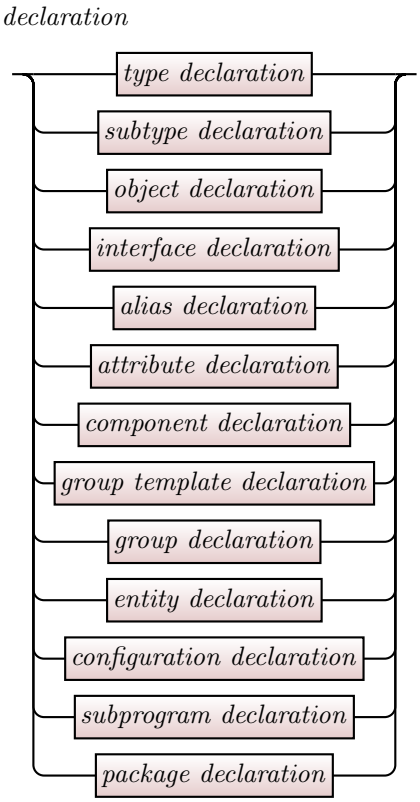
context item



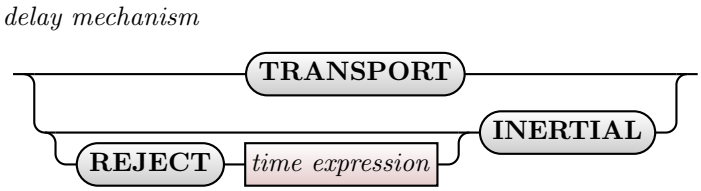
decimalLiteralBox



declarationBox



delayMechanismBox



designFileBox

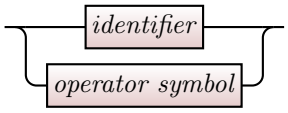
design file

designUnitBox

design unit

designatorBox

designator

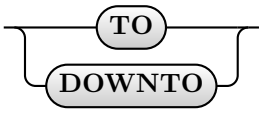


digitBox

digit

directionBox

direction

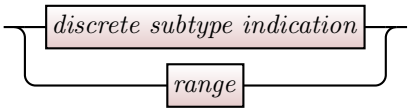


disconnectionSpecificationBox

disconnection specification

discreteRangeBox

discrete range

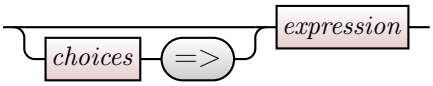


discreteSubtypeIndicationBox

discrete subtype indication

elementAssociationBox

element association



elementDeclarationBox

element declaration

elementSimpleNameBox

element simple name

elementSubtypeDefinitionBox

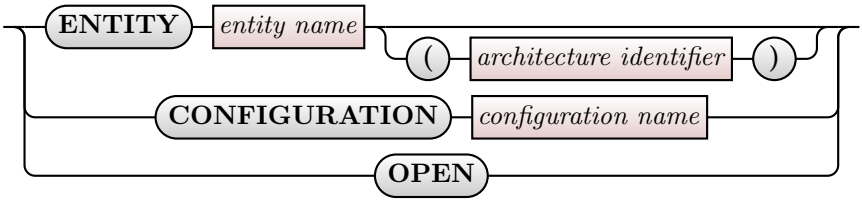
element subtype definition

elementSubtypeIndicationBox

element subtype indication

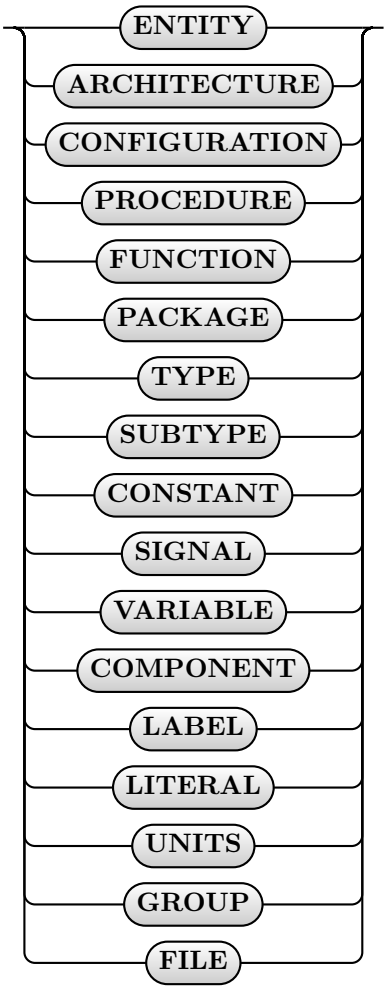
entityAspectBox

entity aspect



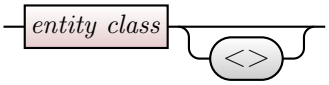
entityClassBox

entity class



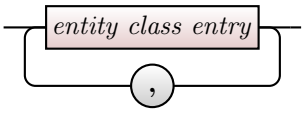
entityClassEntryBox

entity class entry



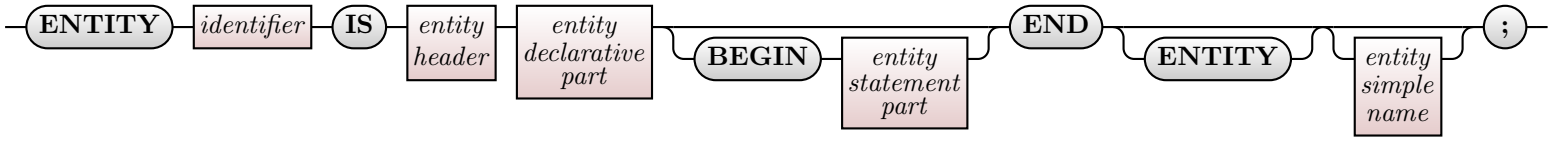
entityClassEntryListBox

entity class entry list



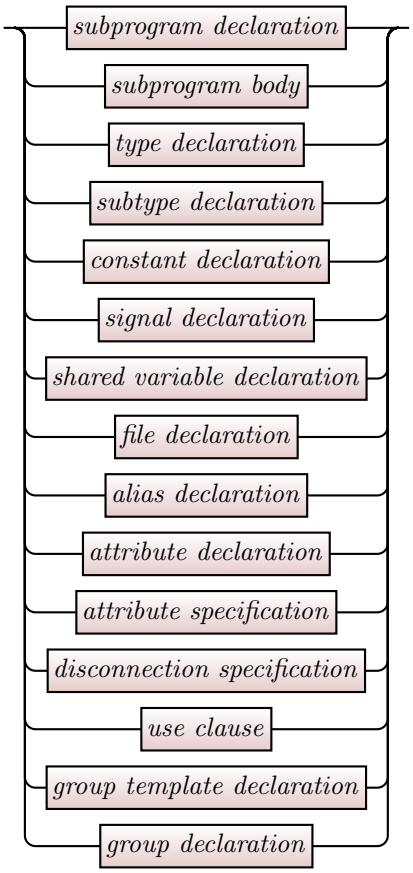
entityDeclarationBox

entity declaration



entityDeclarativeItemBox

entity declarative item

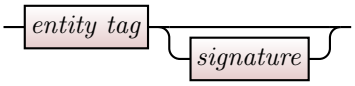


entityDeclarativePartBox

entity declarative part

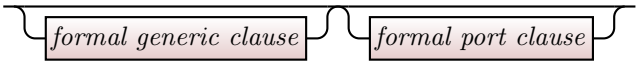
entityDesignatorBox

entity designator



entityHeaderBox

entity header

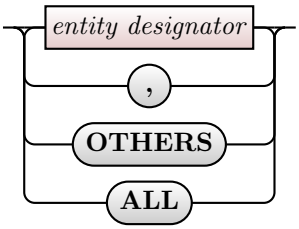


entityNameBox

entity name

entityNameListBox

entity name list



entitySimpleNameBox

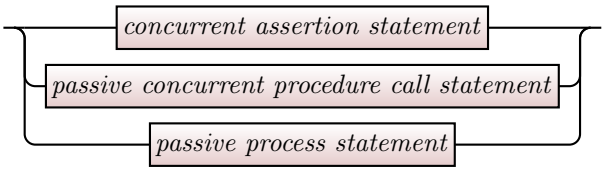
entity simple name

entitySpecificationBox

entity specification

entityStatementBox

entity statement

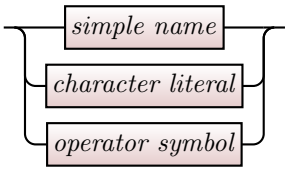


entityStatementPartBox

entity statement part

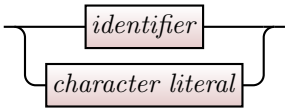
entityTagBox

entity tag



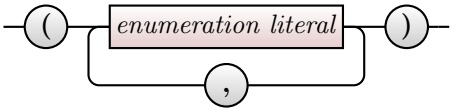
enumerationLiteralBox

enumeration literal



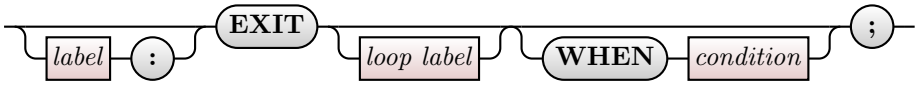
enumerationTypeDefinitionBox

enumeration type definition



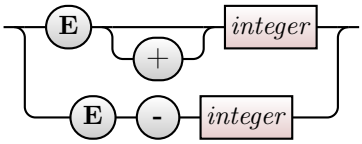
exitStatementBox

exit statement

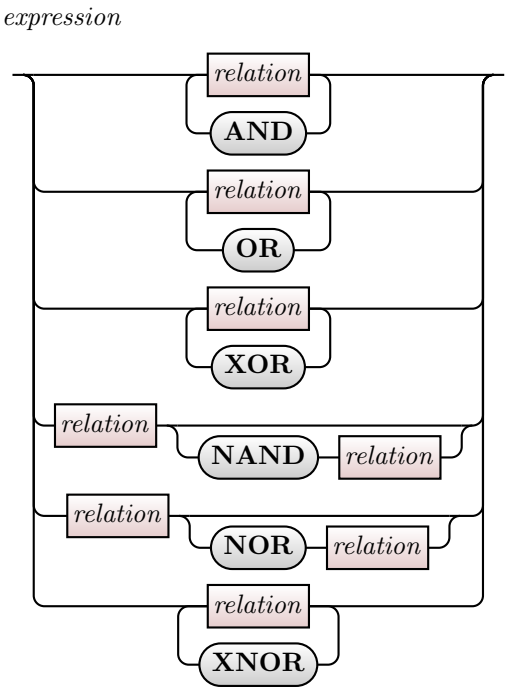


exponentBox

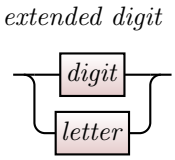
exponent



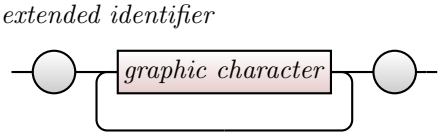
expressionBox



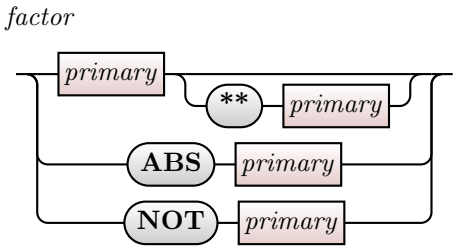
extendedDigitBox



extendedIdentifierBox

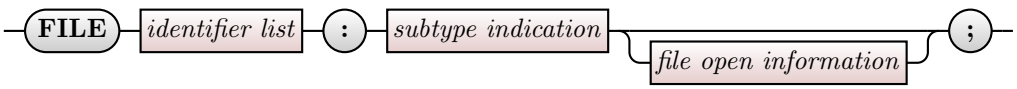


factorBox



fileDeclarationBox

file declaration



fileLogicalNameBox

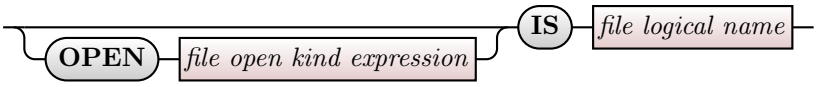
file logical name

fileNameBox

file name

fileOpenInformationBox

file open information



fileOpenKindExpressionBox

file open kind expression

fileTypeDefinitionBox

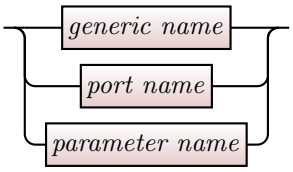
file type definition

floatingTypeDefinitionBox

floating type definition

formalDesignatorBox

formal designator



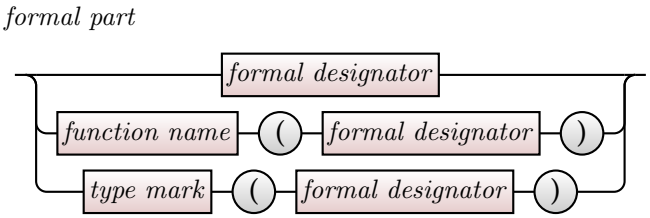
formalGenericClauseBox

formal generic clause

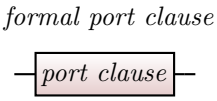
formalParameterListBox

formal parameter list

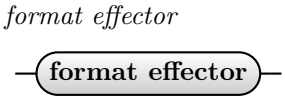
formalPartBox



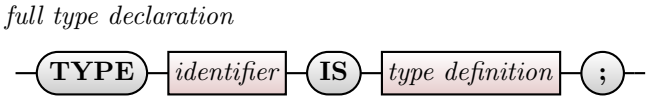
formalPortClauseBox



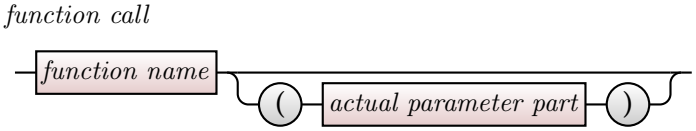
formatEffectorBox



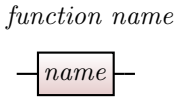
fullTypeDeclarationBox



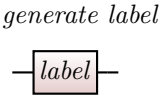
functionCallBox



functionNameBox



generateLabelBox



generateParameterSpecificationBox

generate parameter specification

parameter specification

generateStatementBox

ate statement

nerate label : *generation scheme* **GENERATE** *block declarative item* **BEGIN** *concurrent statement* **END** **GENERATE** *generate label*

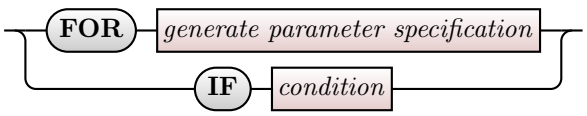
generateStatementLabelBox

generate statement label

label

generationSchemeBox

generation scheme



genericAssociationListBox

generic association list

genericClauseBox

generic clause

genericInterfaceListBox

generic interface list

genericMapAspectBox

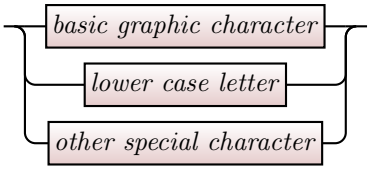
generic map aspect

genericNameBox

generic name

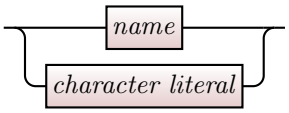
graphicCharacterBox

graphic character



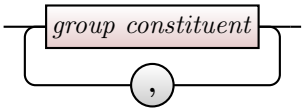
groupConstituentBox

group constituent



groupConstituentListBox

group constituent list



groupDeclarationBox

group declaration

groupTemplateDeclarationBox

group template declaration

groupTemplateNameBox

group template name

guardExpressionBox

guard expression

guardedSignalListBox

guarded signal list

guardedSignalSpecificationBox

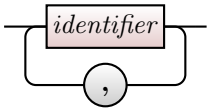
guarded signal specification

identifierBox

identifier

identifierListBox

identifier list

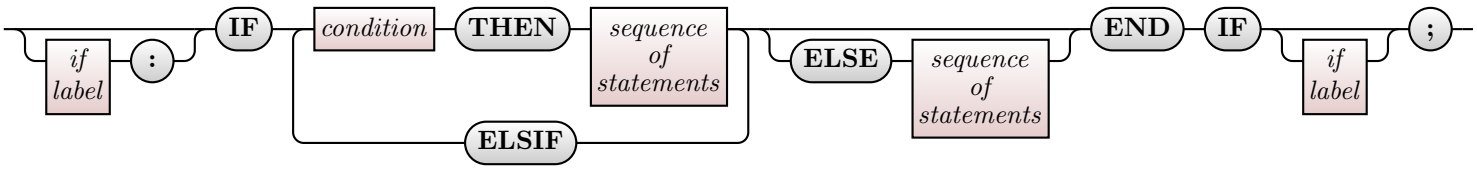


ifLabelBox

if label

ifStatementBox

if statement

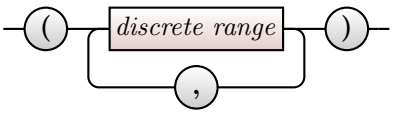


incompleteTypeDeclarationBox

incomplete type declaration

indexConstraintBox

index constraint



indexSpecificationBox

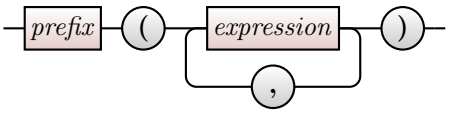
index specification

indexSubtypeDefinitionBox

index subtype definition

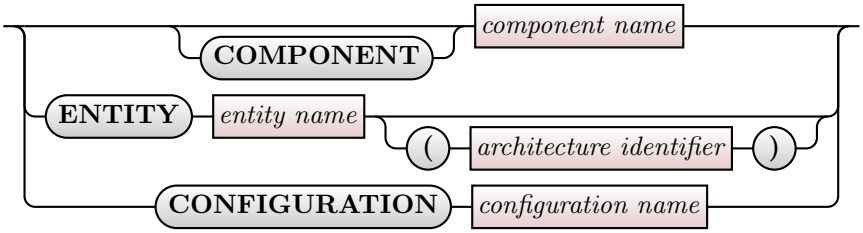
indexedNameBox

indexed name



instantiatedUnitBox

instantiated unit

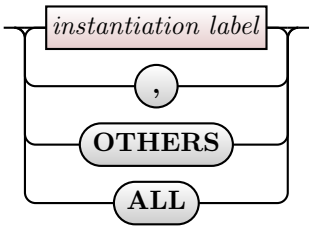


instantiationLabelBox

instantiation label

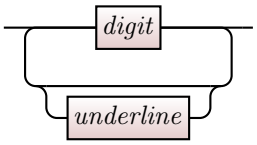
instantiationListBox

instantiation list



integerBox

integer

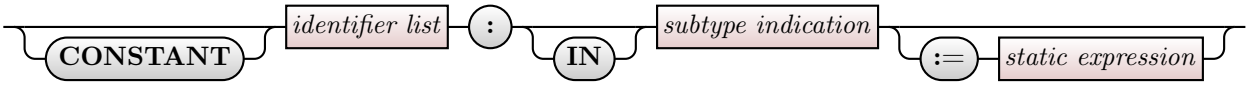


integerTypeDefinitionBox

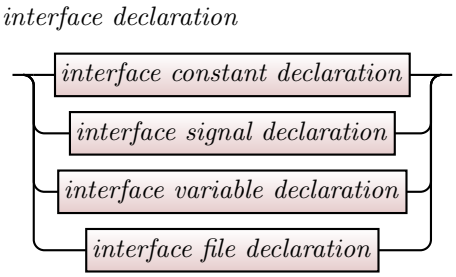
integer type definition

interfaceConstantDeclarationBox

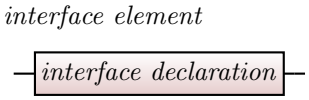
interface constant declaration



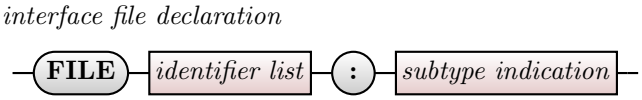
interfaceDeclarationBox



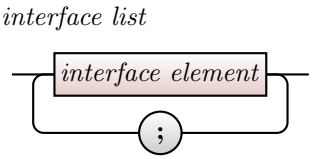
interfaceElementBox



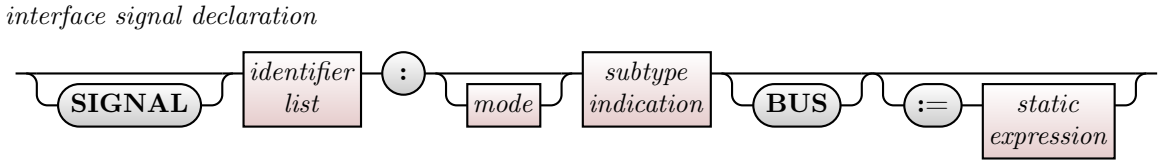
interfaceFileDeclarationBox



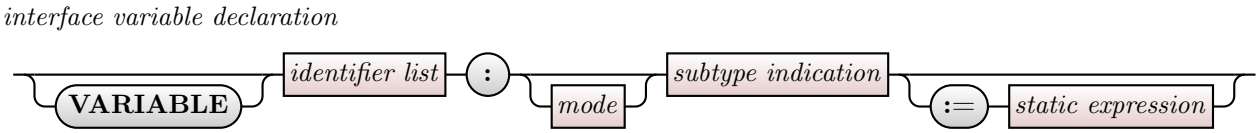
interfaceListBox



interfaceSignalDeclarationBox

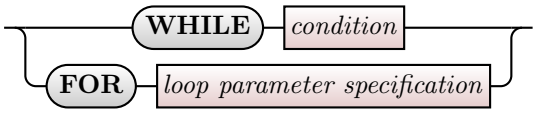


interfaceVariableDeclarationBox



iterationSchemeBox

iteration scheme

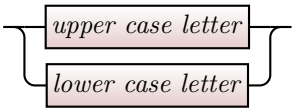


labelBox

label

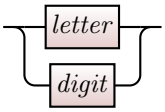
letterBox

letter



letterOrDigitBox

letter or digit

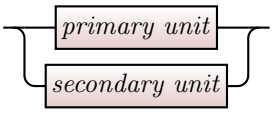


libraryClauseBox

library clause

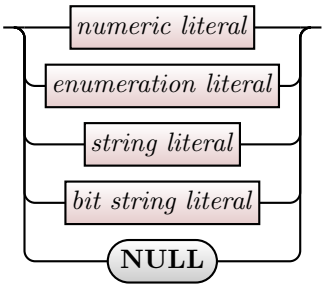
libraryUnitBox

library unit



literalBox

literal



localGenericClauseBox

local generic clause

localPortClauseBox

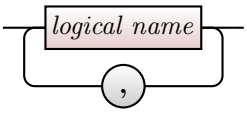
local port clause

logicalNameBox

logical name

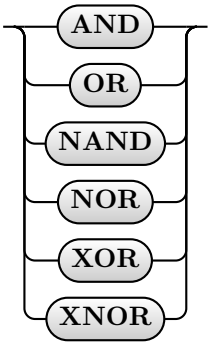
logicalNameListBox

logical name list



logicalOperatorBox

logical operator



loopLabelBox

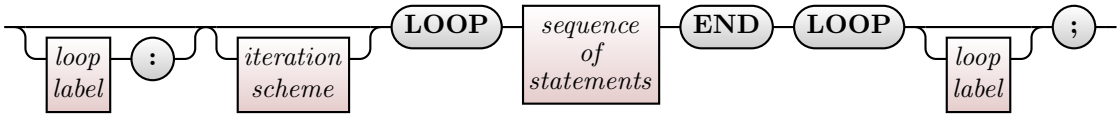
loop label

loopParameterSpecificationBox

loop parameter specification

loopStatementBox

loop statement

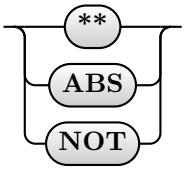


lowerCaseLetterBox

lower case letter

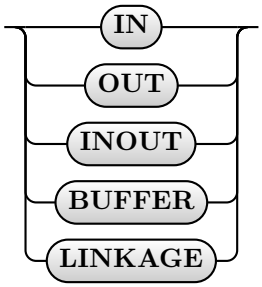
miscellaneousOperatorBox

miscellaneous operator



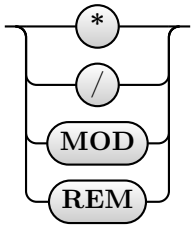
modeBox

mode

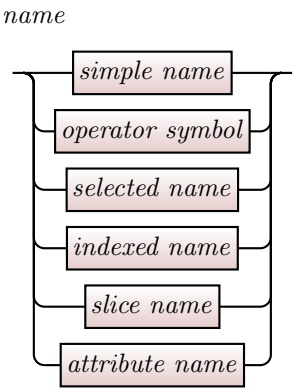


multiplyingOperatorBox

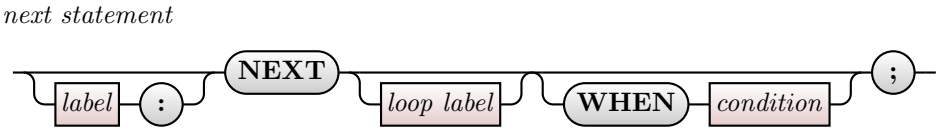
multiplying operator



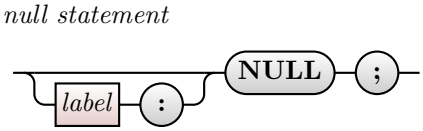
nameBox



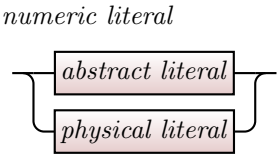
nextStatementBox



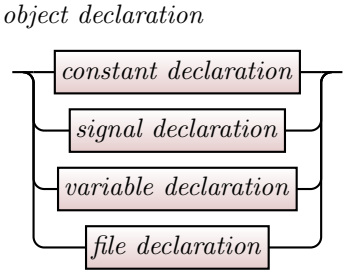
nullStatementBox



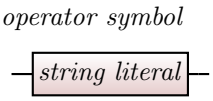
numericLiteralBox



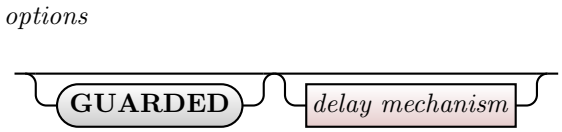
objectDeclarationBox



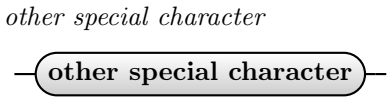
operatorSymbolBox



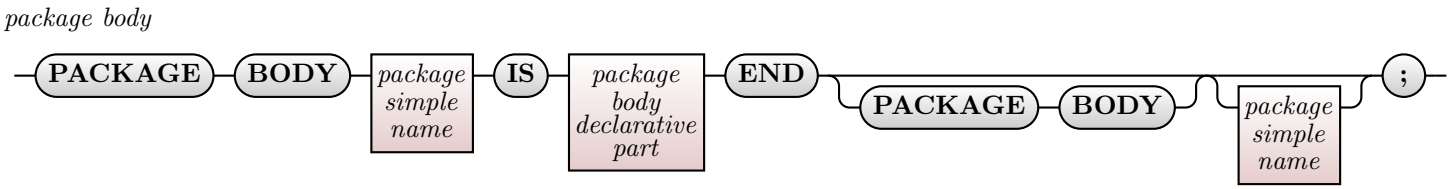
optionsBox



otherSpecialCharacterBox

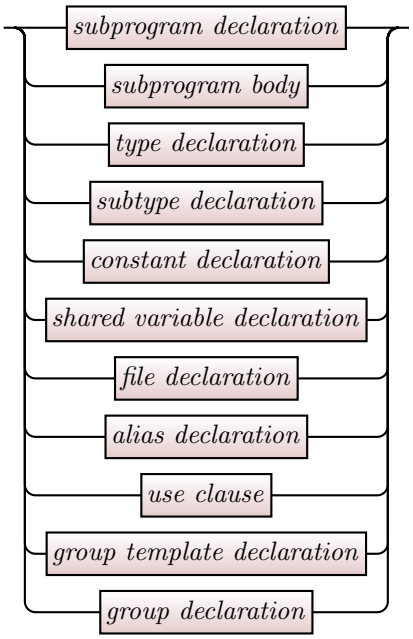


packageBodyBox



packageBodyDeclarativeItemBox

package body declarative item

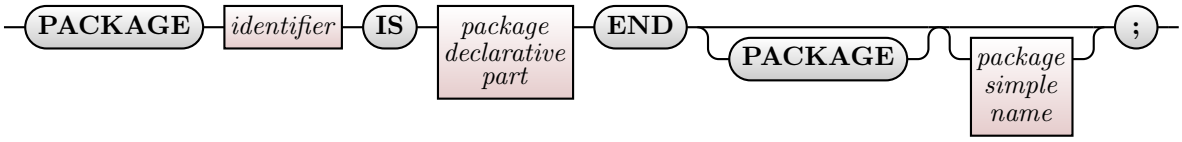


packageBodyDeclarativePartBox

package body declarative part

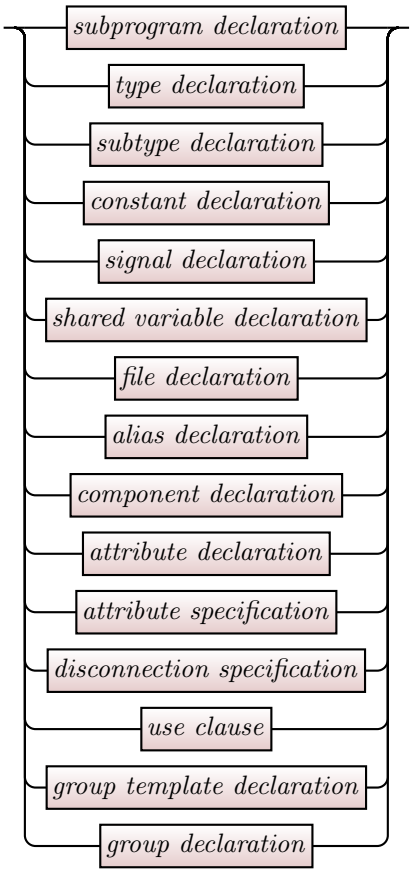
packageDeclarationBox

package declaration



packageDeclarativeItemBox

package declarative item



packageDeclarativePartBox

package declarative part

packageSimpleNameBox

package simple name

parameterAssociationListBox

parameter association list

parameterInterfaceListBox

parameter interface list

parameterNameBox

parameter name

parameterSpecificationBox

parameter specification

passiveConcurrentProcedureCallStatementBox

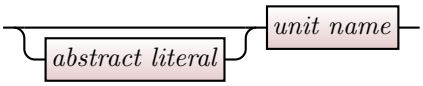
passive concurrent procedure call statement

passiveProcessStatementBox

passive process statement

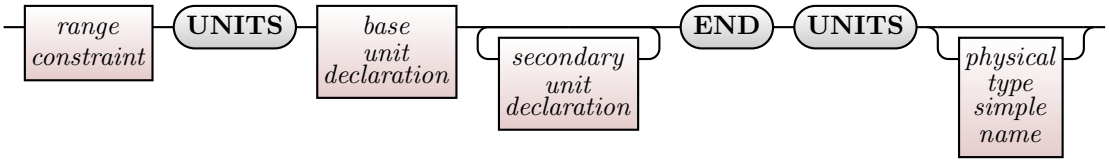
physicalLiteralBox

physical literal



physicalTypeDefinitionBox

physical type definition



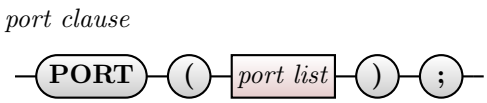
physicalTypeSimpleNameBox

physical type simple name

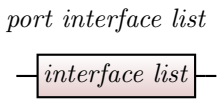
portAssociationListBox

port association list

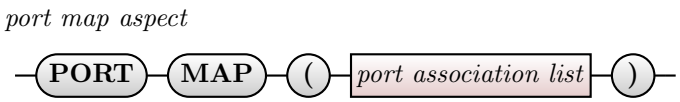
portClauseBox



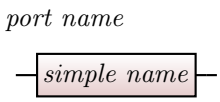
portInterfaceListBox



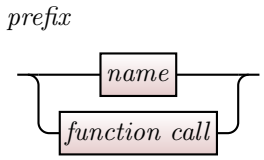
portMapAspectBox



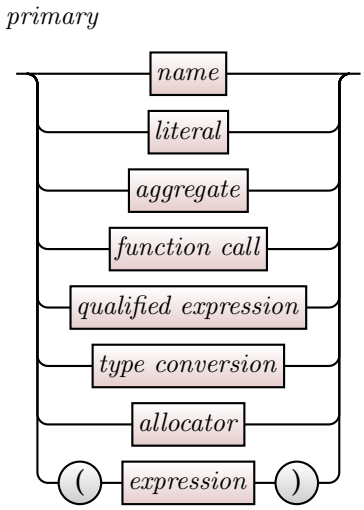
portNameBox



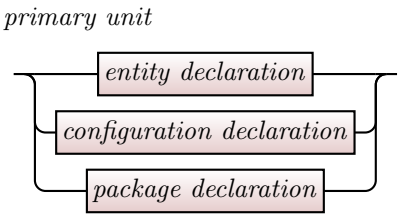
prefixBox



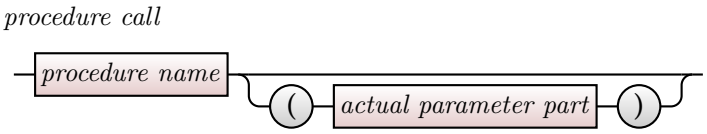
primaryBox



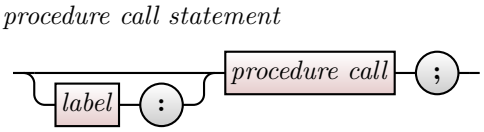
primaryUnitBox



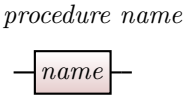
procedureCallBox



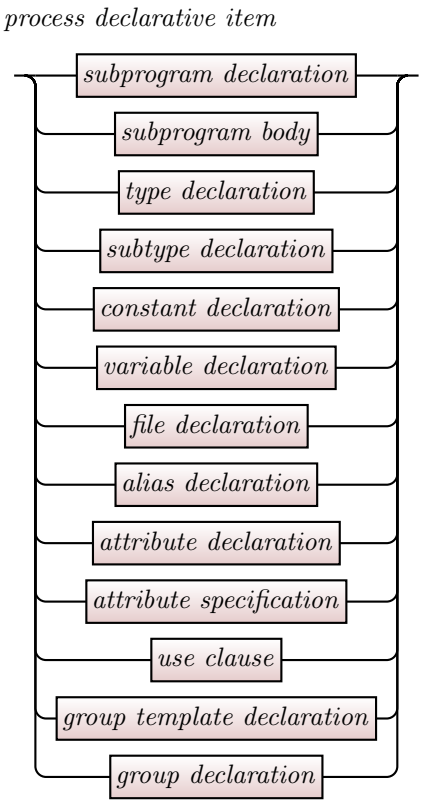
procedureCallStatementBox



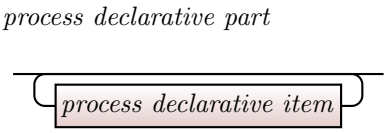
procedureNameBox



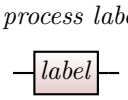
processDeclarativeItemBox



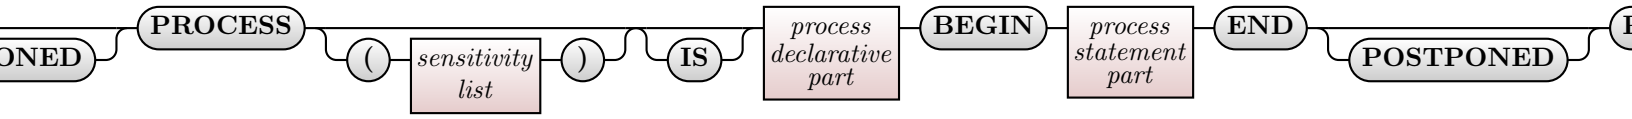
processDeclarativePartBox



processLabelBox



processStatementBox

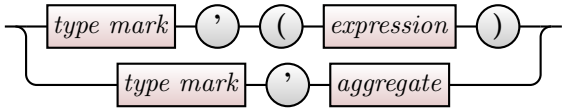


processStatementPartBox

process statement part

qualifiedExpressionBox

qualified expression

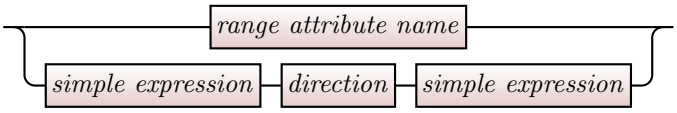


rangeAttributeNameBox

range attribute name

rangeBox

range

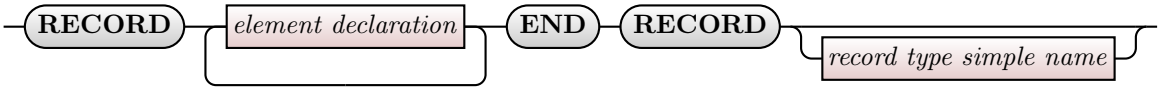


rangeConstraintBox

range constraint

recordTypeDefinitionBox

record type definition

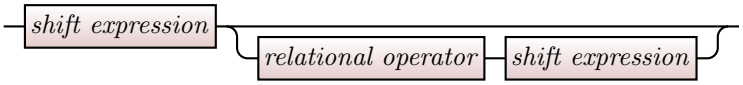


recordTypeSimpleNameBox

record type simple name

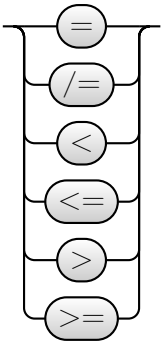
relationBox

relation



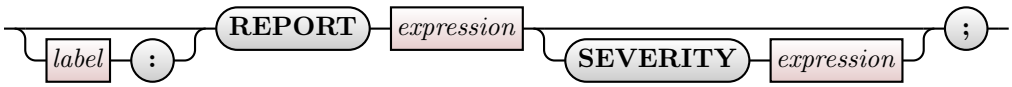
relationalOperatorBox

relational operator



reportStatementBox

report statement



resolutionFunctionNameBox

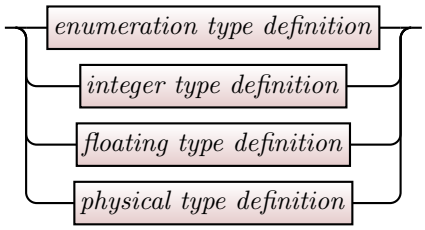
resolution function name

returnStatementBox

return statement

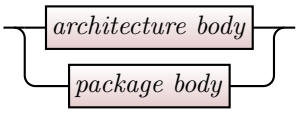
scalarTypeDefinitionBox

scalar type definition



secondaryUnitBox

secondary unit



secondaryUnitDeclarationBox

secondary unit declaration

selectedNameBox

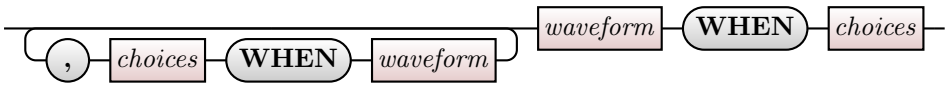
selected name

selectedSignalAssignmentBox

selected signal assignment

selectedWaveformsBox

selected waveforms

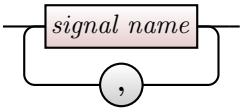


sensitivityClauseBox

sensitivity clause

sensitivityListBox

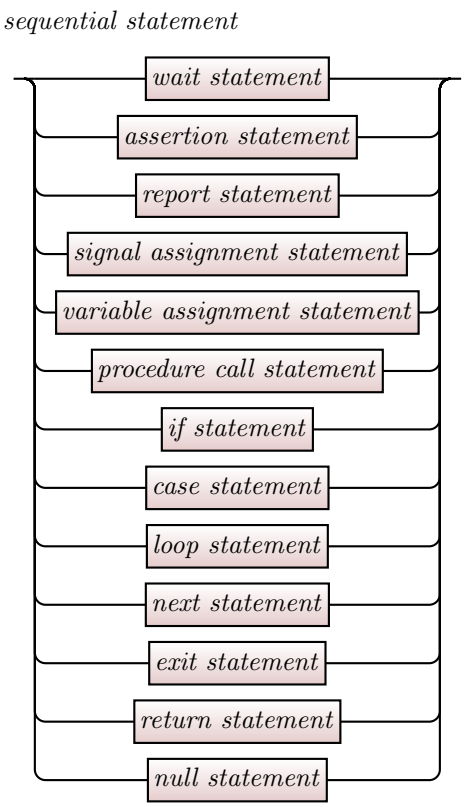
sensitivity list



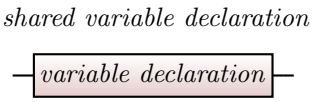
sequenceOfStatementsBox

sequence of statements

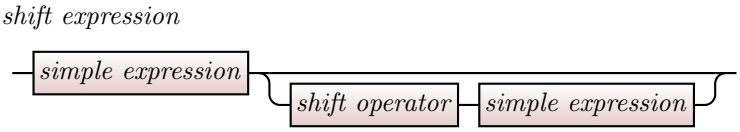
sequentialStatementBox



sharedVariableDeclarationBox

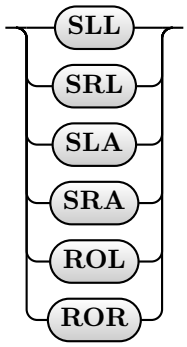


shiftExpressionBox



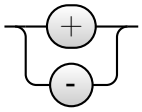
shiftOperatorBox

shift operator



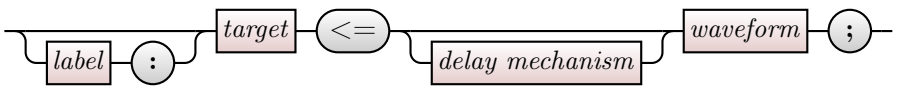
signBox

sign



signalAssignmentStatementBox

signal assignment statement



signalDeclarationBox

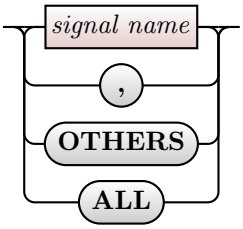
signal declaration

signalKindBox

signal kind

signalListBox

signal list



signalNameBox

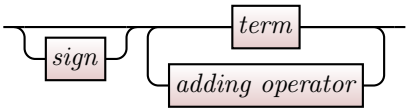
signal name

signatureBox

signature

simpleExpressionBox

simple expression



simpleNameBox

simple name

sliceNameBox

slice name

spaceCharacterBox

space character

specialCharacterBox

special character

staticExpressionBox

static expression

stringExpressionBox

string expression

stringLiteralBox

string literal

subprogramBodyBox

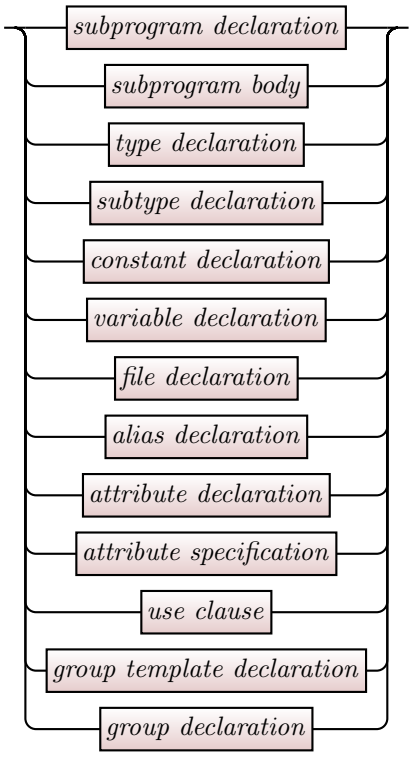
subprogram body

subprogramDeclarationBox

subprogram declaration

subprogramDeclarativeItemBox

subprogram declarative item

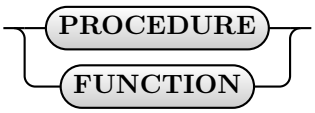


subprogramDeclarativePartBox

subprogram declarative part

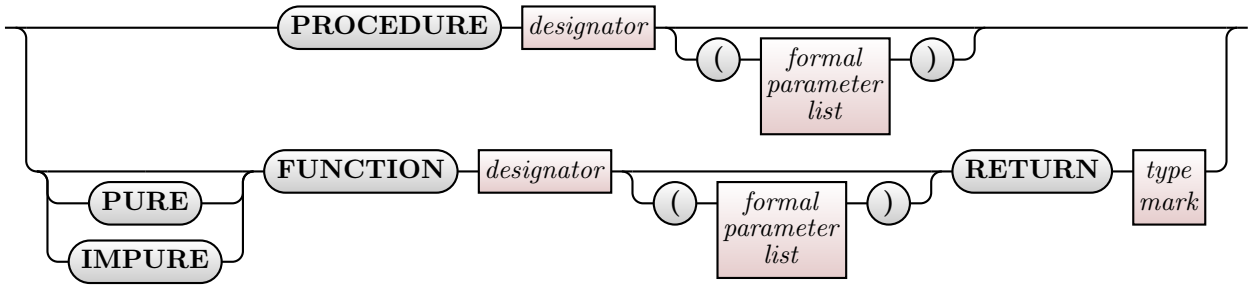
subprogramKindBox

subprogram kind



subprogramSpecificationBox

subprogram specification



subprogramStatementPartBox

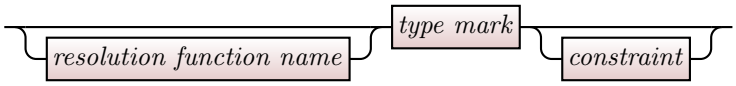
subprogram statement part

subtypeDeclarationBox

subtype declaration

subtypeIndicationBox

subtype indication

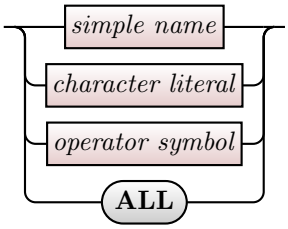


subtypeNameBox

subtype name

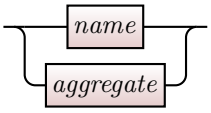
suffixBox

suffix



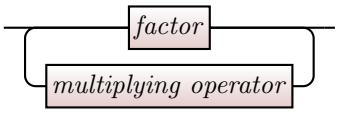
targetBox

target



termBox

term



timeExpressionBox

time expression

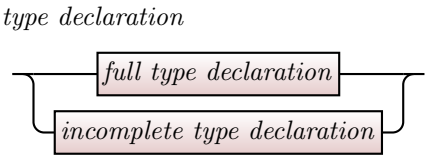
timeoutClauseBox

timeout clause

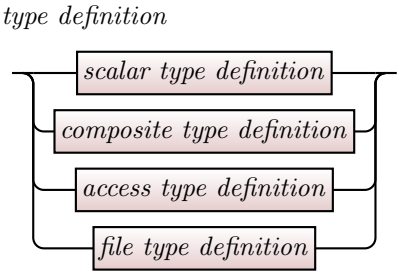
typeConversionBox

type conversion

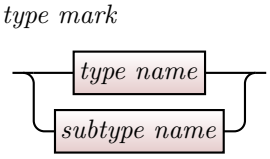
typeDeclarationBox



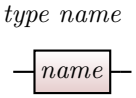
typeDefinitionBox



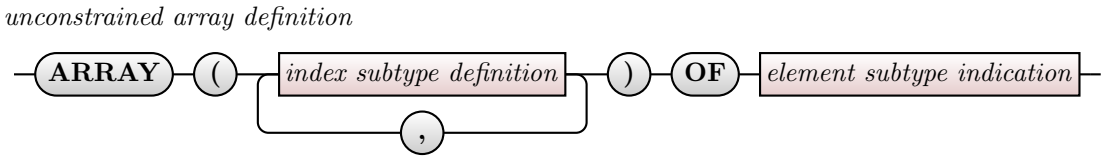
typeMarkBox



typeNameBox



unconstrainedArrayDefinitionBox



underlineBox

unitNameBox

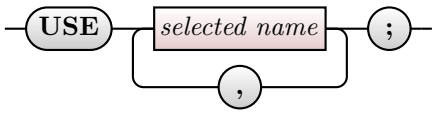
unit name

upperCaseLetterBox

upper case letter

useClauseBox

use clause

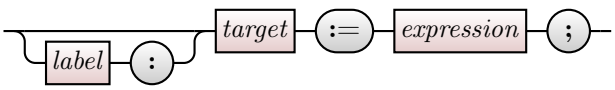


valueExpressionBox

value expression

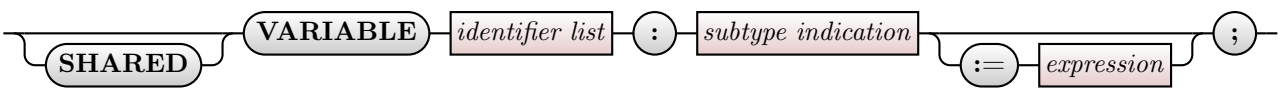
variableAssignmentStatementBox

variable assignment statement



variableDeclarationBox

variable declaration

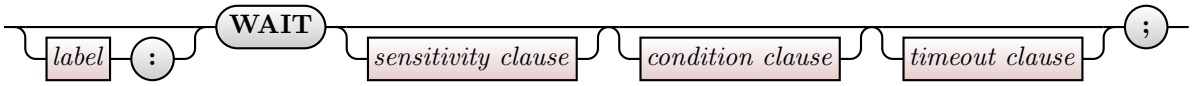


variableNameBox

variable name

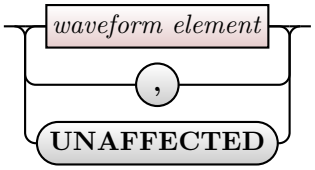
waitStatementBox

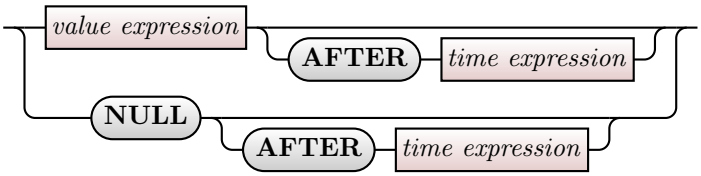
wait statement



waveformBox

waveform



waveformElementBox


waveform element
